

HIRING FUNNEL TRACKER DASHBOARD

Power BI Project Report

Prepared By

Kailash Gowtham

B.E. Computer Science and Engineering

1. Introduction

Recruitment is one of the most critical business functions in any organization. Companies receive applications from multiple sources and candidates pass through several stages before being hired. Tracking and analyzing this recruitment process manually can be difficult and time-consuming.

The Hiring Funnel Tracker Dashboard was developed using Microsoft Power BI to provide a comprehensive view of recruitment activities. The dashboard enables recruiters and HR managers to monitor candidate progression, recruiter performance, hiring costs, and source effectiveness through interactive visualizations and KPI-driven insights.

2. Business Problem Statement

Organizations often face challenges in understanding:

- How many candidates enter the hiring pipeline.
- Where candidates drop off during the recruitment process.
- Which recruitment sources generate quality candidates.
- Which recruiters perform best.
- How much it costs to hire candidates.
- How long it takes to fill positions.

Without proper analytics, recruitment decisions may be inefficient and resource-intensive.

This project addresses these challenges by providing a centralized dashboard for monitoring and optimizing recruitment performance.

3. Project Objectives

The objectives of this project are:

- Track candidates across the hiring funnel.
 - Monitor recruitment KPIs.
 - Measure recruiter effectiveness.
 - Evaluate hiring source performance.
 - Analyze hiring costs and efficiency.
 - Support data-driven hiring decisions.
-

4. Dataset Description

The project uses a simulated enterprise recruitment dataset consisting of four tables.

4.1 Candidates Table

Contains candidate-level recruitment information.

Key Columns

- Candidate_ID
 - Candidate_Name
 - Gender
 - Age
 - City
 - Role_Applied
 - Department
 - Source
 - Applied_Date
 - Screened_Date
 - Shortlisted_Date
 - Interview1_Date
 - Interview2_Date
 - Offer_Date
 - Accepted_Date
 - Joining_Date
 - Offer_Status
 - Final_Status
 - Recruiter_ID
 - Job_ID
 - Hiring_Cost
-

4.2 Recruiters Table

Contains recruiter-related information.

Key Columns

- Recruiter_ID
 - Recruiter_Name
 - Experience_Level
 - Region
 - Joining_Year
-

4.3 Jobs Table

Contains job opening information.

Key Columns

- Job_ID
 - Role_Name
 - Department
 - Hiring_Manager
 - Open_Date
 - Target_Close_Date
 - Number_of_Positions
 - Salary_Band
 - Priority
 - Location
-

4.4 Calendar Table

Used for time-based reporting and trend analysis.

Key Columns

- Date
 - Year
 - Quarter
 - Month_No
 - Month_Name
 - YearMonth
 - Weekday
-

5. Data Cleaning and Transformation

Data cleaning was performed using Power Query.

The following transformations were applied:

- Converted date fields to Date format.
- Converted hiring cost to numeric format.
- Validated candidate status progression.
- Standardized column names.
- Verified data consistency across tables.
- Removed formatting issues and ensured correct data types.

6. Data Model

A Star Schema data model was implemented to improve reporting performance and maintain scalability.

Relationships

- Candidates ↔ Recruiters
- Candidates ↔ Jobs
- Candidates ↔ Calendar

Data Model Structure

The Candidates table acts as the central fact table while Recruiters, Jobs, and Calendar serve as dimension tables.

7. DAX Measures

The following measures were created using DAX.

Recruitment Metrics

- Total Applicants
- Shortlisted Candidates

- Interviewed Candidates
- Offered Candidates
- Joined Candidates

Conversion Metrics

- Interview Conversion Rate
- Offer Conversion Rate
- Offer Acceptance Rate
- Joining Rate

Operational Metrics

- Time to Hire (Days)
- Cost per Hire

These measures provide actionable insights into recruitment efficiency and candidate progression.

8. Dashboard Pages

Page 1 – Hiring Overview

This page provides a high-level summary of recruitment performance.

Visualizations

- KPI Cards
- Hiring Funnel Chart
- Monthly Applications Trend
- Source of Hire Performance
- Hiring by Role

KPIs

- Total Applicants
 - Shortlisted Candidates
 - Interviewed Candidates
 - Offered Candidates
 - Joined Candidates
 - Time to Hire
-

Page 2 – Recruiter Performance

This page evaluates recruiter productivity and hiring effectiveness.

Visualizations

- Recruiter Performance Summary Table
- Top Recruiters by Hires
- Hiring by Experience Level
- Hiring by Region

KPIs

- Total Hires
 - Time to Hire
 - Cost per Hire
-

Page 3 – Source and Cost Analysis

This page focuses on recruitment channel effectiveness and hiring efficiency.

Visualizations

- Hires by Source
- Total Hiring Cost by Source
- Cost vs Hiring Efficiency
- Offer Acceptance by Source

KPIs

- Total Applicants
 - Joined Candidates
 - Cost per Hire
-

9. Key Insights

The dashboard generated several important business insights.

Recruitment Funnel

- Candidate volume decreases significantly through the hiring stages.
- Funnel analysis helps identify drop-off points.

Hiring Sources

- LinkedIn generated the highest applicant volume.
- Recruitment sources vary in conversion efficiency.

Recruiter Performance

- Senior recruiters achieved higher hiring outcomes.
- Recruiter performance can be benchmarked using hiring metrics.

Cost Analysis

- Hiring costs differ across recruitment channels.
 - Cost-per-hire provides visibility into recruitment spending.
-

10. Skills Demonstrated

This project demonstrates practical skills in:

- Power BI
 - Power Query
 - DAX
 - Data Modeling
 - Data Cleaning
 - Dashboard Design
 - HR Analytics
 - KPI Development
 - Data Visualization
 - Business Intelligence
-

11. Conclusion

The Hiring Funnel Tracker Dashboard successfully provides a comprehensive view of recruitment performance across multiple dimensions. By integrating recruitment KPIs, recruiter performance analysis, hiring source evaluation, and cost analysis into a single interactive dashboard, the project enables data-driven decision-making and demonstrates the practical application of Business Intelligence techniques using Microsoft Power BI.

This project highlights the importance of analytics in optimizing recruitment processes and improving organizational hiring outcomes.
